**Focus on Service Delivery: Hypersoft Expands Business Metering Services**

*New Business Metering Services Offering Enables Businesses to Assess Back-End and End-to-End IT Performance without Turning to Complex Installation Procedures and Maintenance*

Munich, Germany August 8, 2007

Hypersoft – a leading provider of IT business metrics products announces the launch of business metering services offering. In response to customers' demands, new business metering services are specifically developed to adapt to most challenging environments of the present day.

Agile deployment procedures and compliance with the Service-Oriented Architecture ensure reliable outcome delivery for vital IT services that can be used both by the end-user and service provider. Automated procedures for measuring real-world quality of the service delivered without implanting measuring agents into the internal IT structure provide a substantial bonus for specialized diversified service providers who want quick and hands-free quality assessments. Combined with web based real-time alerting functionality, business metering services present a worthy choice for those wanting to outsource their quality control maintenance.

Alternatively, business metering services offer only minimum add-ons to IT landscape to enable powerful back-end statistical measurements. Large differentiated messaging systems, directories, databases and IT security block posts are closely scrutinized to provide all aspects of performance statistics either quality, quantity or activity oriented.

The real value of this new offering is the fact that business users benefit from improved managerial performance. Corporate informational flows are the only true value generators and maintaining them within sight and notion of direction is the key for success.

## Press Release

### Hypersoft Information Systems

Business metering services provide a set of essential intelligence tools for any executive to uphold and unfold strategic sections of the enterprise. Highly configurable services structure and experienced personnel can set up any required metering system for requested business process monitoring. Unique graphical dashboard presentation provides a real-world observation of key business events on one screen without low level oversaturation. And since presented information is transaction-based, only true statistics is shown, with no approximations or evaluations.

Based on Hypersoft top products OmniAnalyser™ and OmniContext™, the new business metering services offer helps enterprises of any size utilize features of those well known solutions without resorting to company-wide installation procedures, configuration and overall maintenance.

The implications are that long offered solutions can now be used as service by companies with fewer numbers of users or by enterprises that may want to employ only specific parts of Hypersoft's innovative technology for their concrete needs.

Easy deployment with access to only those services that are necessary with no spending for hardware and maintenance signify this offer as one of the most prospecting for a wide variety of IT service consumers and providers.

#### About Hypersoft:

Hypersoft products deliver the most complete information on quality, usage and costs of enterprise IT and IT-based services. Hypersoft pioneered the integrated end-to-end analysis of transaction-based services and designed the industry's most powerful cross-platform enterprise metric solution. Our software provides customers with reliable information for dynamic control and helps them to improve their services' commitment to business.
