Hypersoft Delivers Service-Oriented IT Management with the New Release of the OmniAnalyser™ Software

September 12, 2006, Munich, Germany

Hypersoft Information Systems has announced comprehensive Service-Oriented Architecture support in its IT management software OmniAnalyser™ 9.0.

Now the product, which is widely used by the world's largest IT organisations for analyzing and managing their service delivery processes, addresses a number of additional needs ranging from enforcing service level agreements and compliance policies to producing charging and billing information for used computing resources.

With a service oriented OmniAnalyser™ a business will be able to maintain and build next generation IT infrastructure, compatible with the state of the art delivery models and ITIL standards.

"We observe a wider recognition of IT as a service and a growing understanding that service-oriented standards mark the arrival of a more mature and better controlled information technology operation processes — both for users and for IT professionals," said Serguei F. Dobrinevski, CEO of Hypersoft.

The fundamental advantage of the service-oriented approach is the ability to create service definitions and quality parameters that are business-driven and do not depend on specific software technologies and platforms. As more enterprises start to enjoy service-aware IT, these principles and practices are becoming the industry standard.

"We share the view that service-based model is a precursor for next generation enterprise computing systems. The IT departments that adopted it can deliver more to the business deploying new services just as the need arises, providing a much more structured and meaningful management for the services already in place," said Yuri

Press Release**Hypersoft Information Systems**

Ivanov, Product Manager of Hypersoft.

Today, OmniAnalyser™ includes standardized support for a number of common information services, such as messaging, collaboration, replication, directories, web, and perimeter services. Unique and in-house applications can be managed by using configurable flexible data collection agents.

Hypersoft's software is the only management platform that allows for delivering IT quality and usage metrics in the framework of a managed service model, leveraging the analysis and metering resources across multiple platforms and organizations.

OmniAnalyser™ 9.0 is available now from Hypersoft and its authorised partners.
