New SharePoint reporting from Hypersoft Information Systems raises the bar on corporate collaboration

Hypersoft introduces business-oriented SharePoint reporting for extensive collaboration analysis and its successful integration with other IT services

Munich, Germany February 11, 2010

Seeking to achieve unprecedented upturn of levels of corporate collaboration in large diversified business landscapes, Hypersoft Information Systems has launched its new OmniAnalyser™ 2009 SharePoint reporting offering, available as both service and stand-alone monitoring package. Particularly useful for businesses and service providers, new SharePoint analysis framework aids service managers and other business professionals in maintaining and strengthening of corporate information exchange and access to global business knowledge.

Providing a clear dissected view on SharePoint sites usage by different organizational units such as offices, departments or single individuals, Hypersoft has maintained its notion of statistical accuracy and precision through transactional data collection, monitoring and processing in business-oriented manner.

From now on service managers have strengthened their ability of correctly identifying unused or seldom-used SharePoint resources in platform- and technology-agnostic manner allowing implementing drastic changes for infrastructure optimization and increase in the overall return on investment. Additionally, sites usage metrics collected by monitoring agents in an autonomous manner and passed to the central processing database through secure channels on global scale gives a thorough ground for service providers to offer unbiased and up-to-date SharePoint hosting services with reliable charging options advantageous for both the supplier and the client.

Hypersoft is aware that only proactive business orientation is the key

Hypersoft Information Systems

for strategic long-term corporate success. Resource growth rate reports with intelligent filtering and scheduling instrumentation offers professionals with enough bias to quickly perform accurate trending and forecasting analysis so that the overall corporate adaptation to dynamic environment change would not be destabilized or shifted towards technical rather than business dimension. Furthermore, historical metrics on SharePoint security in addition to sites ownership status is useful for revision and control of corporate security policies as well as compliance with government regulations, best practices frameworks and other business scenarios.

About Hypersoft:

Hypersoft Information Systems is world's leading provider of IT services metrics solutions with over a decade history of researching, developing, implementing and running metering services for global key players. Its years long field expertise and know-how has since then helped service providers, corporations and government bodies to maintain and improve their service delivery scenarios, effectively reinforcing internal and external levels of collaboration, thus making it easier to focus on long-term objectives.
