

## Hypersoft OmniAnalyser™ Named Messaging Winner at Tech Ed 2003

Munich, 12 June 2003. Windows & .NET Magazine Network, a Penton Media property, announced the winners of the Best of Show Awards for Tech Ed 2003 at the Hyatt Regency Hotel in Dallas, Texas on June 4.

Awards were presented to Windows technology vendors in several categories. The field included more than 211 entries, and the judges evaluated products based on their strategic importance to the market, competitive advantage, and value to the customer.

“All of the products that were finalists for the Best of Show Awards were truly excellent”, said Michael Otey, senior technical editor. “It was difficult to make the final decisions”, said David Chernicoff, senior contributing editor for Windows & .NET Magazine.

The winner in the messaging category was Hypersoft’s OmniAnalyser™. David Chernicoff said, “This product offers a very comprehensive view of your entire email infrastructure and how messages progress through it. You can drill down on messages, find about message content, and see that information in either real-time or report-based views”.

OmniAnalyser™ provides companies with central web-reporting mechanisms, where data from multiple distributed sources over the global e-mail organization is analyzed, and wide ranges of comprehensive drill-down reports are offered to IT staff and business units.

# Press Release

Hypersoft Informationssysteme GmbH

**hypersoft**

OmniAnalyser™ reports on service levels, usage trends, e-mail costs and broad range of operational performance issues in companies that use MS Exchange, Lotus Notes, Sendmail, iPlanet within homogeneous or mixed e-mail environments.

As messaging systems are a prime target for SLAs, with popular items being message delivery times, mailbox usage, and server capacity management, message delivery times in particular can be difficult to monitor across all the servers in bigger companies. OmniAnalyser™ provides an easy way to keep track of all details of the messaging system. Because all reports are web-based, their interface is very straightforward and they are easily accessible from everywhere within the organization just by using a standard web browser.

Hypersoft presents the most recent versions of its OmniAnalyser™ and OmniContext™ Reporting Server software next at IT Forum in Copenhagen.
