Hypersoft OmniAnalyser™ to Report on IBM Lotus Instant Messaging Usage

Munich, 26 July 2004. Hypersoft Information Systems GmbH, which offers the messaging reporting and analysis software OmniAnalyser™ for Lotus Notes and Microsoft Exchange, provides a new set of web reports for IBM Lotus Instant Messaging and Web Conferencing, formerly known as Sametime.

OmniAnalyser™ helps companies bringing instant messaging in line with actual business usage to cut costs and improve quality of service. The new reports gives administrators analysis and reports on enterprise-wide usage, capacity utilization, and cost allocation of instant messaging. Thus, information like all meetings by date per given time period, users connected to Sametime, participants per organizational unit as well as the duration of all meeting room client connections is provided.

IT managers will benefit from the reports to optimize Sametime server load and traffic, while business managers can use comprehensive metrics to improve budget accuracy and allocate costs across the enterprise based on usage patterns of instant messaging for every single organizational unit.
